JURIAID

PROBLEM

Legal case management in Sri Lanka are largely manual and time-consuming. Lawyers must search across multiple legal sources to identify relevant cases and statutes, while existing systems rely mainly on keyword searches that lack understanding. In addition, statutory amendments and legal questions are handled manually, increasing workload and the risk of errors, and reducing the efficiency and accessibility of legal research.

STAKEHOLDERS

PRIMARY USERS	SECONDARY USERS	DECISION MAKERS
Lawyers & Legal Practitioners	Judges, Law Students	Law Firms, Bar Association of SL

OBSERVED ISSUE

- Legal professionals spend many hours per case manually searching across fragmented legal sources such as judgments, statutes, and gazettes.

MATTERS

- Delays in legal case preparation
- Increased workload for legal professionals
- Risk of missing important legal information
- Reduced efficiency in legal research

RESEARCH GAPS & OBJECTIVES

RESEARCH GAP

Existing legal systems handle tasks like case retrieval, statute search, or question generation separately and often rely on keyword-based methods with limited semantic understanding. There is no integrated system specifically designed for the Sri Lankan legal domain that combines these capabilities within a single platform.

MAIN OBJECTIVE

Develop ***JuriAid*** - A multi-agent agentic AI system that automates legal research, past-case retrieval, laws & amendment retrieval and question generation, specifically tailored for Sri Lankan legal domain.

JURIAID

SOLUTION OVERVIEW – WHAT WE BUILT

SOLUTION SUMMARY

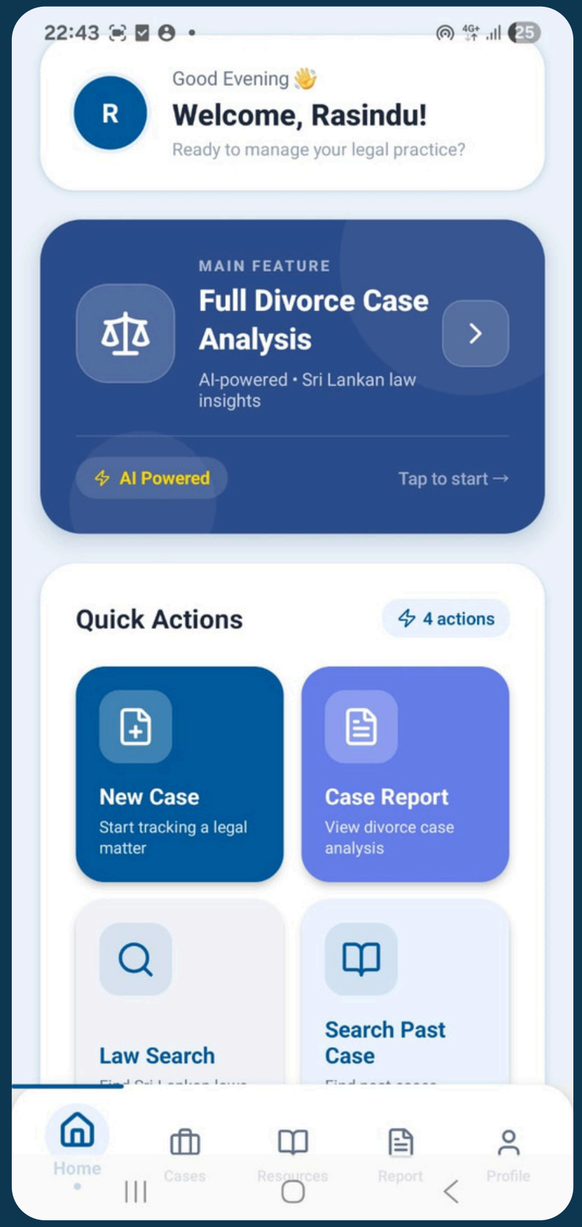
JuriAid is Sri Lanka's first agentic AI legal assistant - automatically retrieving relevant past cases, applicable laws, and generating court-ready legal questions through a multi-agent AI pipeline.

KEY FEATURES

- PDF Upload & Case Parsing
- Role Classification
- Knowledge Graph Construction
- Hybrid Statute Retrieval
- Automated Question Generation
- Agentic Orchestration Framework

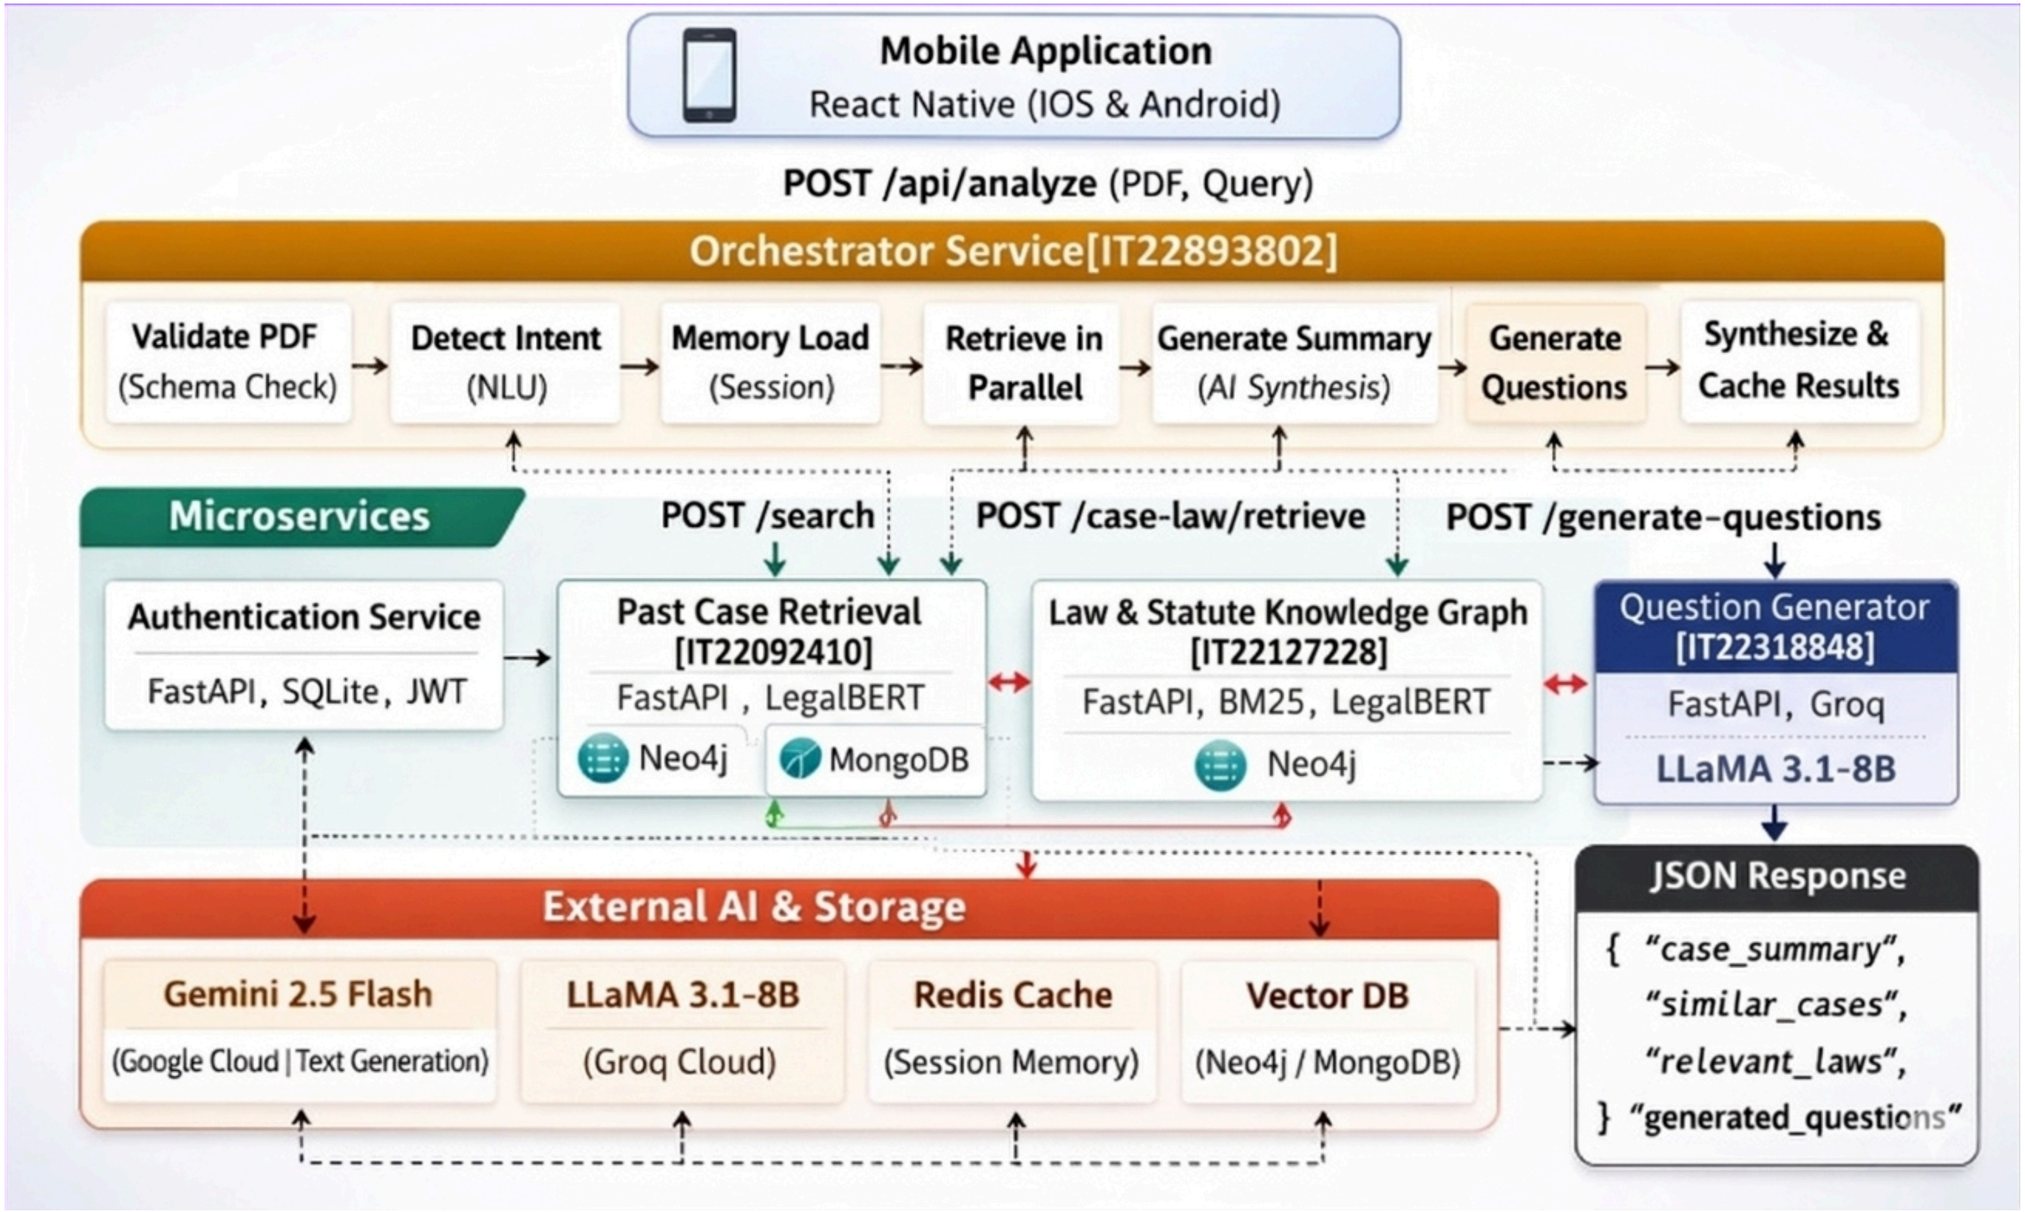
NON-FUNCTIONAL

- Performance
- Security (JWT/PDP Act)
- Usability
- Reliability
- Scalability



JURIAID

SYSTEM DIAGRAM



JURIAID

COMMERCIALIZATION & IMPACT

TARGET USERS / MARKET

- Lawyers & law firms across Sri Lanka
- Law students
- paralegals & the Bar Association of Sri Lanka

VALUE PROPOSITION

- Automates legal research processes
- Retrieves relevant past cases, statutes, and amendments automatically
- Generates context-aware legal questions to support case preparation
- Reduces research time compared to manual methods
- Improves accuracy and efficiency beyond traditional keyword-based systems

COST & FEASIBILITY

- Subscription: LKR 7,500 / user / mont
- Operational cost ≈ LKR 40,425 (10 users)
- Break-even around 10 users
- Highly scalable with increasing user adoption

ADOPTION PLAN / NEXT STEPS

- Pilot testing with selected law firms to evaluate system performance
- Collaboration with the Bar Association of Sri Lanka
- Nationwide rollout through cloud and mobile platforms

Thank You
